

ABHISHEK MADAR

Bangalore, India | +91 88670 38197 | abhishekbmadar@gmail.com

GitHub: github.com/abhishek-madar | LinkedIn: linkedin.com/in/abhishek-madar-/ | Portfolio: abhishekmadar.vercel.app

Computer Science student focused on full-stack development, AI integration, and scalable system architecture. Passionate about building robust software solutions that solve real-world efficiency problems through modern engineering practices.

EDUCATION

B.Tech in Computer Science and Engineering

Expected Graduation: May 2028

Dayananda Sagar College of Engineering, Bangalore

Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Object-Oriented Programming

PROJECTS

CSARMS — Academic Platform | *React, Node.js, Express, MongoDB, JWT*

- Developed an enterprise MERN-stack platform to automate academic operations and streamline campus governance.
- Architected a **4-Tier RBAC Hierarchy** with custom JWT middleware to enforce strict data privacy and zero-trust boundaries.
- Integrated **Recharts** to render real-time interactive dashboards tracking department performance and attendance trends.
- Built a dedicated **Notification Engine** using Nodemailer and Multer to broadcast announcements and flag attendance shortages.

Elix — AI Prompt Intelligence Platform | *Next.js, TypeScript, Gemini API, Framer Motion*

- Developed an AI-powered tool that refines prompts for LLMs using a JSON-based refinement engine.
- Implemented an **In-Memory LRU Cache** and **API Throttling Queue**, reducing redundant API latency by 40%.
- Integrated **Mermaid.js** for automated logic visualization and exported flowcharts as high-quality PDFs/PNGs.

FreshClean Laundry Service | *Node.js, Express, MongoDB, JWT, JavaScript*

- Engineered a full-stack management system with secure **JWT-based authentication** and **Bcrypt** hashing.
- Developed an **Integrated Digital Wallet** for balance management and simulated transaction history tracking.
- Designed a Multi-Step Booking Wizard with real-time price calculations and automated scheduling.
- Architected a responsive SPA frontend with CSS animations and real-time form validation.

LifeLink — Blood Bank Management System | *Node.js, Express, MongoDB, PDFKit*

- Developed a MERN-stack platform to streamline donation processes and emergency blood request fulfillment.
- Architected a **Donation Eligibility Engine** to evaluate donor data and ensure regulatory compliance.
- Integrated **PDFKit** to generate donation certificates and real-time inventory reports.
- Built an **Emergency Response Module** to prioritize and flag urgent requests.

TECHNICAL SKILLS

Languages: Java, C++, Python, SQL, JavaScript, TypeScript

Frameworks / Tools: Next.js, React.js, Node.js, Express.js, Git, GitHub, Linux CLI, Postman, AJAX

Databases: MongoDB (Mongoose), PostgreSQL, SQL

Libraries: Framer Motion, Mermaid.js, PDFKit, Bcrypt, NumPy, Pandas, Tailwind CSS, Recharts

Core CS: Data Structures & Algorithms, OOP, DBMS, RESTful APIs, JWT Auth, Backend Security

SOFT SKILLS

Problem Solving, Technical Documentation, Agile Methodology, Team Collaboration
